for the Validation of Automation Systems like PLC, DCS, Controllers and Computerized System. However to effectively undertake a Computerized Systems Validation programme, the company need a blend of following skills.

Validation of Automated Systems

Data validation is intended to provide certain well-defined guarantees for fitness, accuracy, and consistency for any of various kinds of user input into an application or automated system. Data validation rules can be defined and designed using any of various methodologies, and be deployed in any of various contexts.

Data validation - Wikipedia

The automated workflow runs validation checks as data is being entered, to ensure that each entry complies with required data standards and expectations. 'We effectively front-load the data validation, using scripts to run error checks before data entries are accepted,' he explains. It is an approach that 1Spatial has used with other clients.
