Teaching Activities - Sedimentary Geology

Training Description: Participants of this intensive training course are those who are familiar with exploration and geology and needs a new depth to their interpretation by knowing the sedimentary setting from data and tools in hand, work on mapping/correlations, understand the different litho-facies with picking detailed zonation from

DE129: SEDIMENTOLOGY

Clastic sedimentology is the branch of geology that studies sediment and sedimentary rocks that are made up of particles that are the solid products of weathering at or near the Earth's surface. Thus, clastic sedimentology

Introduction to Clastic Sedimentology

The South China Sea (SCS) receives approximately 700 million tons of deposits annually in modern times, including about 80% of terrigenous matters provided by surrounding rivers and 20% of biogenic carbonate and silicates and volcanic ash. A similar scenario has been indentified also in the geological past.
