The engine control module, or ECM, constantly tracks voltage signals and records codes when values do not meet with the standard set for a specific system or part. Freightliner codes are categorized as inactive or active. If an error occurs but does not take place during diagnostic testing, it is referred to as an inactive fault.

Please note: Codes 43, 44, and 45 are critical codes and if they are shown, the Stop Engine Light will come on which causes the engine protections to engage and your engine may shut down. All other codes will cause the Check Engine Light to come on which will not engage the engine protections and will allow the engine to continue running.
