As a result, 29 states require Manual-J load calculations* be performed to properly calculate heating and cooling loads for new residential construction (See Section 403.6 of 2009 IECC and Section 1401.3 of 2009 IRC). With Home Energy Partners Manual-J training you will be ready to comply with code requirements. Click the map below to find out what code is required in your state.

Manual-J Load Calculations Required by State Code

Manual S picks up where Manual J leaves off. It lays out a fairly simple (albeit non-intuitive) procedure for selecting equipment based on the design loads. In the case of a furnace, the procedure is trivial: output capacity should be between 100% and 140% of the design heat load.

Manual for the Design of Pipe Systems and Pumps

Manual-D is ACCA's duct design method for properly sizing the airflow pathways - the ductwork - within a residential heating and cooling system. Even though this method has been around for many years, it is rarely implemented (and even less-often implemented correctly). Example of a duct calculator tool (www.hvaccharts.com).

Manual-D duct design is rarely used; less-often done ...

One of the biggest lessons I've learned is that HVAC design is a lot more than Manual J. Most HVAC contractors, home energy raters, and others in this field know about Manual J. Many people even know about Manual D, which describes how to design the duct system. Not so many, however, know about the missing links - Manual S and Manual T.
