Pulsation Systems Cow Time

The true massaging action of the CoPulsation™ Milking System enables the product to operate at a lower pulsing rate. This provides sufficient time for the milk within the short milk tube to be evacuated. Observation of cows milked with the product show that the milk flow does fully cease during the rest phase.

CoPulsation™ Milking System

The default pulsation ratio is oftentimes split between 60 percent open time and 40 percent close time. Ratios can also be split, giving different ratios to front quarters and rear quarters. However, it is always important to consult with the manufacturer, as recommendations for pulsation rates and ratios can vary based on the type of equipment and liner being used.
