launched into space to  
do a specific job. The  
type of satellite that is  
launched to monitor  
cloud patterns for a  
weather station will be  
different than a  
satellite launched to  
send television signals  
across Canada. The  
satellite must be  
designed specifically to  
fulfill its role.

## **Satellites - Types and Uses of Satellites**

# Access Free Use Of Satellite And In

A satellite is any object that moves in a curved path around a planet.

The moon is Earth's original, natural satellite, and there are many man-made (artificial) satellites, usually closer to Earth.

The path a satellite follows is an orbit, which sometimes takes the shape of a circle.
